Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claim 4 is objected to because of the following informalities: "representing a mechanical applied to a preform" appears to be missing a word or words.. Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Birckbichler et al. (US Patent 6,863,860). Birckbichler et al. teaches the basic method and apparatus as claimed. Birckbichler et al. does not teach specifically that a control signal is generated. It is generally well known in the art to use control systems to inspect and identify out-of-parameter containers and to use the control systems to adjust the molding system accordingly. It would have been obvious to a person of ordinary skill in the art at the time of the invention to use well known control techniques, such as generating a control signal, to further define the method and apparatus taught by Birckbichler et al. in order to efficiently form the desired finished containers.

Regarding claims 2-6, 10, and 18, measuring the parameters of pressure, temperature, heat, thickness, etc, are all well known equivalents in controlling mold operation.
